

## **Mounting Procedure:**

## **HP-15 Steel Bracket**

- Position the bracket against the wall or structure where it is to be sited and mark accordingly. The bracket has 3 fixing holes on 30mm centres, ensure that all 3 fixing holes are utilised.
- 2. Fix the bracket to the wall or structure using appropriate fixings, the bracket fixing holes are 7mmø
- 3. Using a Torx driver remove the screw from the lid of the loudspeaker and detach the lid. (be careful not to lose the screw as this will affect the IP integrity of the loudspeaker on reassembly)
- 4. Connect the cable through an appropriate gland and terminate into the terminal block in the connection chamber.
  - Select white/red for 100 volt.
  - Select white /green for 70 volt.
- 5. Select your required wattage tapping on the transformer.
- 6. Re-affix the lid to the body of the loudspeaker, ensuring that the gasket is correctly in place. When fixing the lid be sure not to trap or pinch any of the conductors.
